

AIT

Agent Issue Tracker

- 01 Manager files issue**
Assigns to human or agent
- 02 Agent claims it**
Atomic lock — no race conditions
- 03 Work gets done**
Claude Code reads repo, writes code, opens PR
- 04 AIT logs everything**
Tokens, time, full audit trail
- 05 Manager reviews + ships**
Human always controls what merges

Why AIT Exists.

No agent-native tracker

Jira, Linear, GitHub Issues are designed for humans only. Agents can't self-select work.

Zero cost visibility

No token or compute tracking. You can't budget what you can't measure.

Race conditions

No claim-locking. Multiple agents grab the same task simultaneously.

Tool fragmentation

Solo builders need one unified view

THE PRODUCT

A website, built on Cloudflare, where issues get assigned to humans or agents. Pick your agent, it pulls context from the site, and the work gets done.

List + Kanban

Human UI, drag-and-drop

Agent JSON Endpoint

GET/POST/PATCH typed schema

Claim-Locking

Atomic, no double-claims

Token Tracking

Budget + actual per issue

Audit Log

Every change logged

Autonomy Modes

Suggest → Yolo tiers

TARGET USER

Solo dev. Running the Whole Operation.

Solo Entrepreneur

Building a product with a small mixed team; humans and AI agents on the same backlog.

PAIN POINTS

- No visibility into agent cost or output
- Can't tell if a task is stuck or quietly failing
- No structured way to hand off work to agents

NEEDS FROM AIT

- ✓ One place to file work and see its status
- ✓ Atomic claim-locking; no double-work
- ✓ Token cost visibility to budget agents
- ✓ Review gate before agent work ships

PROTOTYPE DEMO

Prototype.

Used Claude Code for generating a demo using our planned backlogs

The screenshot shows the 'Issue Board' in 'List View'. At the top, there are five status summary cards: 3 Open, 3 In Progress, 1 Pending Review, 1 Blocked, and 1 Closed. Below these are filters for 'All statuses', 'All priorities', 'Assignee...', and a search bar. A table lists 9 issues with columns for priority, ID, title, status, assignee, tokens, and updated time.

PRI	ID	TITLE	STATUS	ASSIGNEE	TOKENS	UPDATED
P0	Issue-001	Fix: auth token expiry not refreshing on mobile	OPEN	unassigned	0 / 3,000	13d ago
P1	Issue-002	Feature: add keyboard shortcuts to issue list	IN PROGRESS	unassigned	0 / 2,500	6d ago
P2	Issue-003	Refactor: consolidate all localStorage access into data.js	OPEN	unassigned	0 / 2,000	14d ago
P2	Issue-004	Docs: update CLAUDE.md with new file ownership	OPEN	sarah	0 / 1,500	15d ago
P0	Issue-005	Fix: kanban drag and drop not persisting status change	IN PROGRESS	claude-agent-1	720 / 2,000	13d ago
P1	Issue-006	Feature: implement token burn progress bar on dashboard	PENDING REVIEW	claude-agent-2	1,840 / 2,500	13d ago
P1	Issue-007	Bug: token budget not persisting after page reload	CLOSED	claude-agent-1	980 / 1,500	15d ago
P2	Issue-008	Feature: add sprint summary export to markdown	BLOCKED	unassigned	0 / 2,000	14d ago
P1	Issue-009	Refactor: Normalize auth module token handling	IN PROGRESS	unassigned	0 / 2,500	6d ago

At the bottom left, there are controls for 'demo', 'agent', 'reset', and 'console'. At the bottom right, there is an Apple logo icon.

Issue Board · List View

The screenshot shows the 'Dashboard - Token Burn' view. At the top, there are filters for 'SPRINT' and 'Status' (3 Open, 3 In Progress, 1 Pending Review, 1 Blocked, 1 Closed). The main content is divided into two sections: 'Live Activity' and 'Token Burn'.

Live Activity

- Issue-009 claimed by claude-agent-demo 6d ago
- Issue-001 created by dev-demo 6d ago
- Issue-002 claimed by ara 6d ago
- Issue-006 submitted for review by claude-agent-2 13d ago
- Issue-005 claimed by claude-agent-1 13d ago
- Issue-001 created by patrick 13d ago
- Issue-002 created by alex-wood 14d ago
- Issue-008 blocked: waiting for dashboard layout decision by patrick 14d ago
- Issue-003 created by claude-agent-1 14d ago
- Issue-006 claimed 14d ago

Token Burn

SPRINT BUDGET
Tokens 20000

USED THIS SPRINT

of 20,000 budget
17.7%

BY AGENT

- claude-agent-2 1,840
- claude-agent-1 1,700

TOP 3 BY COST

- Feature: implement token burn progress b... 1,840
- Bug: token budget not persisting after p... 980
- Fix: kanban drag and drop not persisting... 720

Dashboard · Token Burn

What Changed.

Architecture decisions made during Sprint 1 → Sprint 2.

Storage Layer

PLANNED

localStorage for all issue data

PROBLEM

AI agents cannot read localStorage without special browser permissions. Real agent integration was impossible

DECISION

Migrated to Cloudflare Workers + KV. Real HTTP endpoints, shared state across users and agents. Documented in ADRs.

Data Layer

PLANNED

data.js handling all logic

PROBLEM

Static GitHub Pages site can't serve a real API. Agents had no way to poll for work over HTTP.

DECISION

Replaced with workers.js on Cloudflare. All CRUD now goes through the Worker. Agents and frontend hit the same endpoints.

Schema Governance

PLANNED

schema.md as a loose informal reference document

PROBLEM

3 teams building on top of it with no enforcement. schema drift was causing inconsistencies across files.

DECISION

schema.md locked as source of truth. Any change now requires a new ADR.

Team Status.

Team 1 · Data & Workflow Core

- ✓ Issue schema locked (schema.md)
- ✓ CRUD: createIssue, getIssueById, updateIssue, deleteIssue, claimIssue, postResult, closeIssue, blockIssue
- ✓ Workflow states defined
- ✓ UI helpers

-
- Sample issue dataset
 - Audit log structure
 - Filtering + sorting
 - Frontend/API integration support

Team 2 · Frontend & UX

- ✓ Low-fi wireframes
- ✓ Typography + color system
- ✓ List view + Kanban layout
- ✓ Issue detail + modal structure
- ✓ Dashboard + settings layout

- ✓ Filters + search

-
- Render real issue data
 - Dashboard integration
 - UI cleanup

Team 3 · Agent Workflow & DevOps

- ✓ /api/issues, /api/claim, /api/complete
- ✓ Agent Simulator
- ✓ Cloudflare Workers + KV live
- ✓ API Contract

-
- Connect simulator to issue state
 - Connect API to frontend
 - Token tracking + audit log
 - AIT Runner

Overall Progress.

Agile process completed past sprints.

✓ Standups

3x per week · async Slack
Done / Doing / Blocked format
md files logged to repo

✓ Retrospectives

Run in Retrium each sprint
Team reflects on what went well
Action items tracked forward

✓ Professor Check-in

Weekly TA meetings attended
Notes committed to /docs/
Check-Ins with stakeholders done

✓ 8 ADRs

Written in MADR format
On our repo under Docs/ADRs

✓ Miro Boards

Sprint board active
Backlog changes
Team aligned on priorities

✓ CI/CD + Team Logs

ESLint + SemVer + Conventional
Commits enforced on all teams
docs/team-log maintained per team
