

Team Rules & Working Agreement

This document defines how we operate as a team, including communication, responsibilities, and expectations. Our goal is to build a professional, respectful, and collaborative engineering environment that reflects real-world software development practices while helping each member grow technically and professionally.

Team Goals

Our goal is to strengthen our software engineering skills while improving communication, system design, team coordination, and collaborative problem-solving. Through this project, we aim to gain hands-on experience with real engineering workflows, including ownership, deadlines, iteration, and maintainability.

Team Values

We operate with respect, accountability, and honesty. Equal effort is an expectation. We support each other through collaboration and feedback.

Communication Standards

All communication will take place on Slack. Share updates, blockers, and decisions openly. Communicate issues early.

Meetings and Attendance

We meet Tuesdays at 8:30 PM on Zoom. Be prepared with updates, blockers, and next steps. Notify the team if you cannot attend.

Roles and Accountability

Each member has clear responsibilities and ownership. Progress must remain visible.

Contribution Expectations

All members must contribute equally, complete work on time, and communicate honestly.

Conflict Resolution

1. One-on-one discussion
2. Team discussion
3. TA escalation
4. Professor escalation

Workflow and Success Standards

Success is measured by deadlines, communication, contribution, and product quality.

Final Commitment

All members commit to professionalism, accountability, and teamwork.
